
How TrainMind reads load.

Six rules we built in.

1 • ONE NUMBER

sRPE.

Session RPE × effective duration.
Everything else starts here.

2 • ACUTE

The last 7 days.

Acute load.

3 • CHRONIC

The last 3 weeks.

Chronic load, averaged.

4 · RATIO

Acute ÷ chronic.

Bands: below 0.8 · 0.8–1.3 · 1.3–1.5 ·
above 1.5. A reading aid, not a diagnosis.

5 • TEAM SESSIONS

Group work counts for the whole roster.

Most athletes train with the team. If group sessions aren't attributed, most of the roster looks like it has no load.

6 • MISSING DATA

Under 14 days of
history: **not
assessable.**

Not zero. A gap drawn as zero turns into
a false signal.

Wellness doesn't decide.

It confirms or contradicts what the load is saying.
