TrainMind — User Guide

Subtitle: Basketball strength and conditioning, from planning to return to play Version: September 2026 · Part A — Coach app · Part B — Athlete app

1 What TrainMind is

TrainMind is the platform a strength and conditioning coach uses to plan, record and read a basketball team's work. It holds together four things that usually live in separate spreadsheets: **planning** (periodization, mesocycles, sessions), **the court** (attendance, timers, RPE), **monitoring** (daily wellness, loads, ACWR) and **return from injury** (Return-to-Play protocols with clearance criteria).

One principle runs through all of it: load is measured as **sRPE** — session RPE multiplied by actual duration. From there come the acute load (last 7 days), the chronic load (the average of the last 3 weeks) and their ratio, the **ACWR**. Daily wellness decides nothing on its own: it confirms or contradicts what the load says.

Who it is for. The coach who plans and reads the data; the head coach who wants to know who is available tomorrow; the medical staff following a return; the athlete, who fills in wellness and sees sessions from their own app.

What you need. An up-to-date browser and a connection. Nothing to install: the web app opens at `lab21sport.com/app`. Athletes use a separate web app (`atleti.lab21sport.com`) that installs on the phone like a normal app.

The roles. ADMIN (whoever creates the organization: sees and does everything), TRAINER (plans and records), MEDICAL (injuries and RTP), VIEWER (read only), ATHLETE (the athlete app). Roles are assigned from settings.

2 First access

Creating the account

Create Account
Enter your details to register

First name: Your first name

Last name: Your last name

Date of birth: dd/mm/yyyy

Email: name@team.com

Password: Minimum 8 characters

Confirm Password: Repeat password

Organization name: Your team or organization

Plan:

- Starter** €14/month
- Professional €21/month
- Ultra €30/month

You can change it any time from settings.

CONSENTS:

- ☐ I have read and accept the [Terms of Service](#) *
- ☐ I confirm I have read the [Privacy Policy](#) *
- ☐ **Consent to processing of health/fitness data** (art. 9 GDPR) for the use of AI features on training plans, performance analysis and wellness. You can withdraw it at any time from settings.
- ☐ I agree to receive marketing communications (newsletter, product updates, offers). Optional, revocable.

* Required fields. You must be at least 14. If you are a minor, a parent must create the account for you.

[Create Account](#)

Already have an account? [Log in](#)

Figure 2.1 — Creating the account and choosing a plan

Registration asks for your name, date of birth, email, a password (at least 8 characters) and the **organization name**: this is the club or the staff, and it becomes the workspace where teams, athletes and plans will live. Then you pick a plan — Starter, Professional or Ultra — changeable at any time from settings.

The two consents marked with an asterisk are mandatory: Terms of Service and Privacy Policy. The third, in bold, covers the **processing of health and fitness data** (art. 9 GDPR) and is what powers the AI features on training plans, performance analysis and wellness: without it, those parts stay off. It can be withdrawn from settings. The fourth, about marketing communications, is optional.

Note. Whoever creates the account becomes ADMIN of their organization. Other staff members do not register on their own: you invite them from settings.

Logging in

The screenshot shows the TrainMind login interface. On the left, a dark teal background displays the TrainMind logo and the tagline "The intelligent platform for basketball strength and conditioning coaches". On the right, a light gray background contains the login form. At the top right of the form area is a language selector showing "EN". The form is titled "Log in" and includes the instruction "Enter your credentials to continue". It features two input fields: "Email" (with placeholder "name@team.com") and "Password" (with placeholder "Your password"). Below the password field is a checkbox for "Remember me" and a link for "Forgot password?". A green "Log in" button is positioned below these elements. At the bottom of the form, a link says "Don't have an account? Register".

Figure 2.2 — The sign-in page

Email and password. "Remember me" keeps the session open on that device. Top right, the language selector (IT/EN/ES) works before login too: if the page comes up in a language that is not yours, change it there.

Forgotten password

The screenshot shows the TrainMind password recovery interface. The left side is identical to the login page. The right side, on a light gray background, is titled "Forgot password" and includes the instruction "Enter your email: we will send you a link to choose a new password.". It features an "Email" input field with the placeholder "name@team.com". Below the field is a green button labeled "Send reset link". At the bottom of the form, a link says "Back to login". The language selector "EN" is located at the top right of the form area.

Figure 2.3 — Password recovery

Enter your email and a link arrives to choose a new password. The link expires; if it has, request another. For security, all other sessions are signed out after a password change.

3 How the interface is laid out

Figure 3.1 — The three areas of the interface

The four points marked on the screenshot: **1** the sidebar, **2** the team selector, **3** global search, **4** the profile menu.

Three areas, always the same.

The sidebar, on the left, is the menu: Dashboard, Calendar, Teams, Training (with Periodization, Mesocycles, Sessions, Exercises), Wellness, Injuries & RTP, Analytics & Reports, Alerts, AI Assistant, and Settings at the bottom. The **Collapse** button turns it into a strip of icons: useful on small screens or in the gym.

Figure 3.2 — Sidebar collapsed to icons

The team selector, top left under the logo, filters *the whole* application. With "All teams" you see the entire organization; pick a team and dashboard, wellness, analytics and reports narrow to it.

The top bar holds global search (athletes, exercises, sessions — it also opens from the keyboard), the notification bell, the plan badge and the profile menu.

Figure 3.3 — The profile menu

4 The Dashboard

Figure 4.1 — The Dashboard, with two athletes in the risk zone

On the screenshot: **1** the summary tiles, **2** at-risk athletes with the reason on the right, **3** wellness over the last seven days, **4** returns from injury in progress.

This is the snapshot of the moment. The eight tiles at the top count active athletes, sessions completed in the last 30 days, exercises in the library, injuries, active RTP protocols, periodization plans, scheduled reports and active alerts.

Below is the part that matters.

At-risk athletes. The criterion is written under the title: ACWR on sRPE (7-day load against a 21-day average), with wellness as confirmation. Each row shows the ACWR value, the acute/chronic ratio, the change against the previous week, and recent wellness against that athlete's own average. The label on the right says *why* they are on the list: "Load spike" when ACWR goes above 1.5, "Load rising" in the 1.3–1.5 band.

Why wellness alone is not enough. A 2 out of 5 after a bad night says nothing about injury risk, and an athlete used to scoring high can be deep in overload while scoring 4. What describes risk is the ratio between how much they have worked in the last seven days and how much they are used to working.

Wellness (7 days) sums up the five items with coloured bars: green a good condition, red a critical one. **Return-to-Play** lists open protocols with phase and days elapsed. Further down, the most recent wellness entries.

5 Teams and athletes

Creating a team

Figure 5.1 — The organization's athlete list

Teams → New Team. Name, optional description, a colour that will identify the team in the calendar and in charts, and a logo if you have one.

AT Andrea Trevisan	FZ Federico Zanetti

Figure 5.3 — A team roster

Selecting a team opens its roster. **New Athlete** creates a new record; **Add Existing** pulls from athletes already in the organization — useful for someone training with two teams, because they stay one athlete with one history.

New Athlete

First Name Last Name

Email

Date of birth Position

Jersey number Height (cm)

Weight (kg)

Figure 5.4 — Creating an athlete

First and last name, email (needed later for the app invitation), date of birth, position (PG, SG, SF, PF, C), jersey number, height and weight.

One athlete, one record. Do not duplicate a player to have them appear in two teams: tests, wellness and load history would split in two.

The athlete list

Below the teams sits the **Athletes** section with the whole roster: search by name, filter by position, card or list view, and a "Show archived" checkbox. Archiving, rather than deleting, is the right move for someone leaving the team: the history stays.

The athlete record

TrainMind ULTRA

Search athletes, exercises, sessions...

Aerobic Endurance 1/3 tests: last: 1000 Meter **59.5 min/kg/min** Aug 24, 28

Flexibility —

Figure 5.5 — Athlete record — overview

At the top, personal details and four numbers: sessions, wellness entries recorded, mood at the last entry, active injuries. Three buttons: **Archive**, **Invite to the app** (sends the athlete the link to their app) and **Create AI Training Plan** (generates an individual plan).

Four tabs: **Overview** (anthropometric measures and physical performance), **Training Plans**, **Metrics**, **Injuries**.

6 Tests and measurements

Figure 6.1 — Tests and measurements with the date history

The **Metrics** tab gathers two families of data: **anthropometric measures** (height, sitting height, standing reach, body weight, wingspan, hand length and span) and **physical performance** (strength and explosiveness, speed and agility, aerobic endurance, flexibility).

Each entry shows the latest value, the date and the percentage change against the previous measurement — green if improving, red if not. The strip under each row is the history: every box is a testing date, so progression reads at a glance.

New Measurement adds a testing date. The practical advice is to test every athlete on the same day with the same protocol: aligned dates are what make team charts comparable.

7 Calendar and events

Figure 7.1 — The month calendar

The calendar is the team diary. At the top, the legend of event types: weight room session, basketball practice, individual session, shooting session, game, rehab, meeting, medical, other; plus the planned sessions coming from mesocycles. The green dot marks completed, the blue one planned.

Under the legend sits the **active periodization**: the current mesocycle and the next one, with the phase. "Deload" labels on days come from deload microcycles.

An event moves by **dragging** it onto another day.

Creating an event

The screenshot shows a 'New Event' modal window with the following fields and options:

- Title:** A text input field with the placeholder text 'E.g. Staff meeting'.
- Description (optional):** A larger text input area for additional details.
- Type:** A dropdown menu currently set to 'Other'.
- Team:** A dropdown menu currently set to 'No team'.
- Date:** A date picker showing '10/09/2026'.
- All day:** An unchecked checkbox.
- Start time:** A time picker set to '09:00'.
- End time:** A time picker set to '10:00'.
- Buttons:** 'Cancel' and 'Create Event' buttons at the bottom right.

Figure 7.2 — New event

Create Event: title, description, type, team, date and times. Choosing **Game** reveals the dedicated fields — opponent, home/away, venue.

Figure 7.4 — The day panel

Click a day and the right-hand column lists what happens: the active microcycle with load and intensity, and the events. Click an event and the detail opens with the operational buttons.

Figure 7.5 — Event detail

From a training session you reach **Attendance & Exercises** (chapter 10); from a game, **Game Minutes** (chapter 11).

8 Periodization

Figure 8.1 — The season's periodization plans

Periodization is the macro-structure of the season: a plan with a type (block, undulating, linear), a date range and the mesocycles that make it up. **From template** starts from a ready-made scheme, **Blank plan** from scratch.

Mesocycles

Figure 8.2 — The mesocycle list

Every mesocycle has a name, a phase (preparation, specific, competition, taper, recovery, transition), a length in weeks and a **load percentage** that governs progression. The status label — Completed, In progress, Scheduled — updates itself from the dates.

The 'New Mesocycle' form is a modal window with the following fields: 'Mesocycle name *' with a placeholder 'e.g. Pre-Season Preparation'; 'Description' with a placeholder 'Mesocycle objectives and notes'; 'Start date *' with a date picker set to '10/09/2026'; 'Number of weeks *' with a dropdown set to '4 weeks'; 'Calculated end date: Oct 8, 2026'; 'Training days (optional)' with a row of seven circles labeled M, T, W, T, F, S, S; a note 'No day selected: the weeks stay free, add sessions whenever you like.'; 'Athlete (optional)' with a dropdown set to 'Team mesocycle'; 'Team *' with a dropdown set to 'Select a team...'; and a red error message 'The team is required for a team mesocycle.' at the bottom. At the bottom right are 'Cancel' and 'Create Mesocycle' buttons.

Figure 8.3 — Creating a mesocycle

On creation you choose name, start date, number of weeks and the **training days**: from there the app lays sessions out across the weeks. A mesocycle can be for a team or for one athlete.

Generating a plan with AI

The screenshot shows a web form titled "Generate Plan with AI" with a close button (X) in the top right corner. The form is designed to generate a structured training plan using AI. It includes the following fields and options:

- AI generation:** A teal banner with a star icon and the text: "The AI will generate a structured plan with weeks and sessions, ready to be added straight to your training."
- Mesocycle name:** A text input field with a placeholder: "Leave it empty to use the name the AI suggests".
- Athlete:** A dropdown menu currently showing "Team plan".
- Season phase:** A dropdown menu currently showing "Pre-Season".
- Team *:** A dropdown menu with the placeholder "Select a team...". Below it, a small orange note says: "Choose the team this plan is for."
- Goal:** A dropdown menu currently showing "Max Strength".
- Duration *:** A dropdown menu currently showing "4 weeks".
- Start date *:** A date input field showing "10/09/2026" with a calendar icon. Below it, a small grey note says: "Weeks start from the first selected day on or after this date, so no session lands in the past."
- Training days:** A row of seven circular buttons representing the days of the week: M, T, W, T, F, S, S. The buttons for Wednesday (W), Friday (F), and Saturday (S) are highlighted in green. Below them, it says "3 sessions per week".
- Additional notes (optional):** A text area with a placeholder: "E.g. Athlete recovering from right ankle sprain, avoid jumps...".
- Buttons:** At the bottom right, there are two buttons: "Cancel" and "Generate plan" (which has a star icon).

Figure 8.4 — Generating the plan with AI

Generate with AI builds a complete mesocycle — weeks, loads, sessions — from team, season phase, goal, duration, training days and free-text notes ("athlete recovering from a right ankle sprain, avoid jumps"). The result is an editable draft: read it and correct it, do not apply it blind.

9 Training, sessions and exercises

Inside a mesocycle

The detail view shows the progress bar, the weeks and, inside each, the sessions with date, duration, exercise count and RPE. The week header repeats the mesocycle and the load percentage. **Add session** inserts a session into the week.

A session

Title, date, duration, RPE and the summary line (intensity, load, focus). Below, the exercises in order, each with sets, reps, load in kg and rest: all editable in place.

The session library

Figure 9.3 — The session library

Sessions saved here are **reusable templates**: you import them into mesocycles instead of rewriting them. A planned session that was never carried out can become a template; one that was carried out stays in the history.

The exercise library

Figure 9.4 — The exercise library

Exercises are grouped by category (cardio, strength, plyometrics, mobility, technique) and each carries muscle groups, equipment and, where present, a video. **Import defaults** loads the base library; **New Exercise** adds one of your own. The "Only my exercises" checkbox hides the system ones.

10 Training on court

Figure 10.1 — On court: attendance and traffic lights

On the screenshot: **1** available athletes out of the roster, **2** the session timers, **3** actual duration and session RPE, **4** the traffic light and RPE for the individual player.

This is the page to keep open on a tablet courtside. At the top, the session totals: total time, work, rest between sets and between exercises. Below, **actual duration** and **session RPE**, with the formula spelled out: $\text{load} = \text{RPE} \times \text{actual duration}$. The session RPE applies to players who do not have an RPE of their own.

Players: every card has the traffic light — green available, yellow reduced load, red out — and an individual RPE field. The counter at the top says how many are available out of those on the roster.

Figure 10.2 — On court: exercises and timers

Exercises: a table with sets, work time and rest, plus **Start** and **Stop** buttons on every row. The timers accumulate real time: at the end the totals are the real ones, not the planned ones. The "Warm up" checkbox excludes an exercise from the work count.

Save keeps the sheet open so you can come back to it; **Complete Session** closes it and writes each athlete's load.

11 The game

Figure 11.1 — Game minutes

From a game in the calendar, **Game Minutes** opens the minutes sheet: the quarters (Q1-Q4, plus overtime with **+ OT**), the clock with start and stop, and a row per player with minute bars per quarter, total, RPE and load. The counter at the top right keeps an eye on how many are on court.

The post-game read lives in **Analytics & Reports** → **Reports** → **Post-game report**.

12 Wellness

Figure 12.1 — Wellness: averages, AI analysis and recent logs

The five tiles at the top are the averages for the period and the selection: sleep, fatigue, soreness, stress, mood. Below, **AI Wellness Analysis** produces, on request, a reading of group trends.

Recent Logs is the data table, with the filter bar — team, athlete, from/to. The legend explains the colours: on every item **5 is the best value**, red flags a critical condition and green a good one. It is a uniform scale, chosen deliberately so nobody has to remember that on one item high is good and on another it is bad.

Logging wellness

The screenshot shows a 'Log Wellness' form with the following fields and options:

- Athlete:** A dropdown menu with 'Alessandro Baldini' selected.
- Date:** A date input field showing '10/09/2026'.
- Sleep hours:** A horizontal slider bar set to '7h'.
- Sleep quality:** A section titled 'How did you sleep last night?' with a 1-5 rating scale. The scale options are: 1 (Very poor), 2 (Poor), 3 (Average), 4 (Good), and 5 (Excellent). Option 3 is currently selected.
- Fatigue:** A section titled 'How fresh you feel: 1 = very tired, 5 = not at all' with a 1-5 rating scale. The scale options are: 1 (Extreme), 2 (High), 3 (Moderate), 4 (Light), and 5 (None). Option 2 is currently selected.
- Muscle soreness:** A section titled 'DOMS or muscle pain: 1 = very strong, 5 = none' with a 1-5 rating scale. The scale options are: 1 (Very strong), 2 (Strong), 3 (Moderate), 4 (Mild), and 5 (None). Option 2 is currently selected.
- Stress:** A section titled 'Stress level: 1 = very high, 5 = none' with a 1-5 rating scale. The scale options are: 1 (Very high), 2 (High), 3 (Medium), 4 (Low), and 5 (None). Option 2 is currently selected.
- Buttons:** At the bottom, there are 'Cancel' and 'Save' buttons.

Figure 12.2 — Logging a wellness entry

Normally the athlete fills this in from their own app. The coach can enter it with **Log wellness**: athlete, date, hours of sleep on the slider, and the five items from 1 to 5, each with its meaning spelled out (1 = very poor, 5 = excellent). The notes field is for context ("back from flu").

13 Injuries and Return-to-Play

Figure 13.1 — Injury list and active protocols

The list shows open injuries: athlete, type and area, date, severity, RTP phase reached and days elapsed. The coloured bar is progression through the phases.

Register and start RTP

Figure 13.2 — Registering an injury

New injury: athlete, type (muscular, ligament, tendon, bone...), onset (traumatic, overuse), location, severity from 1 to 5, date, clinical notes. At the bottom, the **return protocol:** the app proposes one automatically based on area, type and severity, showing how many phases it involves and the estimated return date. You can choose a different protocol or start without one.

Figure 13.3 — Injuries on the athlete record

The RTP protocol

Figure 13.4 — The Return-to-Play protocol

On the screenshot: **1** phase progression, **2** the mandatory-criteria counter, **3** the button to advance a phase, **4** the transition history.

The protocol page leads with the current phase, the day of the process and the estimated return. **RTP Progression** shows the phases with the completed ones ticked.

Below sit the **clearance criteria for the current phase:** they are the condition for advancing, and the counter says how many of the mandatory ones are met. You tick them as the athlete reaches them. **Advance phase** moves forward, **Previous phase** steps back when something is not right.

The **transition history** records who advanced the athlete and when: it is the part you need when you have to explain to someone else why a player went back on court that day.

Figure 13.5 — The protocol library

The **protocol library** holds system schemes by body area, type and severity. You duplicate them to adapt them to your team: the copy is editable in every part.

14 Analytics

Five tabs, one shared filter bar (team, athlete, date range).

Team

Figure 14.1 — Analytics — Team tab

A snapshot of the current state: it always uses the last 7 days of wellness and the last 21 of load, because that is how ACWR is computed. The doughnut distributes the roster across the zones (optimal, caution, risk); beside it, the

athletes to monitor. At the bottom, the table of every athlete with wellness, ACWR, zone, sessions in the last 7 days and acute load.

Performance

Figure 14.2 — Analytics — Performance

Sessions, total duration, volume in kg and average RPE for the period, with the training-volume chart and the RPE-and-duration chart per session.

ACWR

Figure 14.3 — Analytics — ACWR

The acute:chronic ratio over time, with the coloured bands: below 0.8 undertraining, 0.8–1.3 optimal, 1.3–1.5 moderate risk, above 1.5 high risk. Below, the per-athlete table with acute load, chronic load and zone.

Wellness

Figure 14.4 — Analytics — wellness heatmap

The heatmap: one row per athlete, one column per day. The score is the sum of the five items normalised from 20% to 100%. Hover a cell to see the arithmetic. This is the view that surfaces the hole: the row turning red for several days in a row.

Attendance

Figure 14.5 — Analytics — attendance

For each athlete: expected sessions, attendance, unavailability, absences, attendance percentage, average RPE and accumulated load. The data comes from the attendance sheets filled in courtside (chapter 10).

15 Reports

Periodic report

The screenshot shows the 'Reports' configuration page in the TrainMind Ultra interface. On the left is a dark sidebar with navigation options: Dashboard, Calendar, Teams, Training, Wellness, Injuries & RTP, Analytics & Reports (selected), Alerts, and AI Assistant. The main content area has a search bar at the top. Below it, the 'Reports' section includes tabs for 'Post-game report', 'Daily report', and 'Scheduled reports'. The 'Configure report' form contains the following fields: 'Audience' (dropdown menu with 'Technical staff' selected), 'Team' (dropdown menu with 'All teams' selected), 'Athlete' (dropdown menu with 'Whole team' selected), 'From' date (11/08/2026), 'To' date (10/09/2026), and a checkbox for 'Include AI summary' which is checked. At the bottom right of the form are three buttons: 'Preview', 'Download PDF', and 'Download Word'.

Figure 15.1 — Configuring a report

Choose the audience (technical staff, medical, management: it changes the language and what is included), the team or the single athlete, the range, and whether to include the AI summary. Then **Preview**, **Download PDF** or **Download Word**.

Daily report

The screenshot shows the 'Daily report' form in the TrainMind Ultra interface. The sidebar is the same as in Figure 15.1. The main content area has a search bar and a 'Daily report' header with a subtitle 'The end-of-day sheet: activities, player availability and guidelines for tomorrow.' and buttons for 'Save', 'PDF', and 'DOCX'. The form includes a 'Team' dropdown (set to 'First Team') and a 'Date' field (10/09/2026) with an 'Unsaved draft' warning. Below this is a section for 'THURSDAY September 10, 2026 - First Team' with a warning: '1 player has a suggested status from injuries or return-to-play protocols. Check and correct before saving.' The 'Activities of the day' section has a note: 'No activities. Add them by hand, or create them as calendar events and reopen the report.' The 'Players' section lists three players with their status and a 0-5 scale: Baldini Alessandro (5), Sartori Marco (5), and Ferraro Luca (5). Each player has a 'Note (optional)' field and a dropdown for 'RPE' and 'ACWR'.

Figure 15.2 — The daily report

The end-of-day sheet: activities carried out, each player's availability on a 0–5 scale (out, rehab, no contact, reduced load, with substitutions, full training), notes per player, and guidelines for tomorrow. If a player has a status suggested by an injury or a return protocol, the app flags it at the top: check and correct before saving. Save, then export to PDF or Word.

Scheduled reports

Figure 15.3 — Scheduled reports

A schedule generates and emails the report by itself, at the cadence you choose.

16 Alerts

Figure 16.1 — Alerts and notifications

Two tabs: **Notifications**, with those received, filterable by type, and **Alert Rules**, where you define what the app should watch (an ACWR above a threshold, say, or wellness dropping). **Run Check** forces the check immediately instead of waiting for the automatic pass.

17 AI Assistant

Chat

Figure 17.1 — The AI assistant chat

A chat with an assistant specialised in basketball strength and conditioning, which knows your organization's exercise library and the TrainMind knowledge base. The suggested questions below are a starting point.

Figure 17.2 — An answer with the sources used

Under every answer sits the number of **sources used**: open them to see where what it said comes from. The usual rule applies: it is a consultant, not a decision-maker. You sign the programme.

Adaptations

Figure 17.3 — Adaptations proposed by the AI

Generates a proposed adaptation of the next session — team or individual — by reading previous sessions. Every proposal must be **approved, rejected or modified**: nothing enters the plan without your say-so.

18 Settings

Figure 18.1 — Settings

Profile (first name, last name, email), **Organization** (name and sport), **Password**, and on the right **Notifications** and **Security**. At the top, the current plan.

Figure 18.2 — Interface theme and language

Under **Appearance** you choose light or dark theme and the interface **language** among Italian, English and Spanish. The choice follows the account, not the device: changed here, it applies everywhere.

19 Common questions

"I see no at-risk athletes." If the list is empty and nobody shows as non-assessable, that is fine: loads are in the right zone. If instead the app says athletes are not assessable, completed sessions from the last three weeks are missing: without load history there is no ACWR.

"Some weeks have no point on the ACWR chart." That is deliberate: when an athlete does not have enough load history in that window, ACWR cannot be computed and no point is drawn. A made-up zero would read as "undertraining" — false information in place of missing information.

"I deleted a mesocycle: did I lose the sessions?" No. Deleting a container does not destroy its contents: sessions that were carried out stay in the athlete's history.

"The athlete is not receiving the invitation." Check the email address on the athlete record and the spam folder. The invitation is re-sent from the record with **Invite to the app**.

"Yesterday's wellness is missing." Wellness belongs to the day it is filled in: if the athlete forgets, the coach can enter it from **Log wellness**, choosing the date.

"Some words are still in Italian." The demo content in this guide — team name, session titles, exercise names — is example data. The RTP protocol library shipped with the product is currently only in Italian.

Part B — The athlete app

20 What it is and how to install it

The athlete app is a separate web app: it opens in the browser at the address in the invitation and **installs on the phone** like a normal application, without going through the stores.

- **Android (Chrome):** ☰ menu → *Add to Home screen*.
- **iPhone (Safari):** Share button → *Add to Home Screen*.

Once installed it sits among the apps, opens full screen and remembers the login.

21 Invitation and first access

The image shows a mobile app sign-in screen for 'TrainMind Athlete Area'. At the top right, there is a language selector showing a globe icon, 'EN', and a dropdown arrow. In the center, there is a green rounded square logo with 'TM' in white, followed by the text 'TrainMind' in bold and 'Athlete Area' in a smaller font. Below this, there are two input fields: 'Email' with the placeholder 'name@email.com' and 'Password' with a masked password '*****'. A large green 'Log in' button is positioned below the password field. At the bottom, there is a link that says 'Don't have an account? Ask your coach to invite you.'

Figure 21.1 — Athlete sign-in

The invitation comes from the coach, from the athlete record, with **Invite to the app**. The athlete gets an email with the link, chooses a password and signs in. The athlete account sees **only their own data**.

22 Home

Figure 22.1 — The athlete home screen

The opening screen says three things: whether today's wellness has been filled in, what the next training session is, and where the athlete stands in their own path (including a return from injury).

23 Daily wellness

Figure 23.1 — Daily wellness

This is the gesture that holds the whole monitoring system up: five items — sleep, fatigue, soreness, stress, mood — on a 1 to 5 scale, plus hours of sleep and an optional note. One minute in the morning, before training. On every item **5 is the best condition**.

Figure 24.1 — Assigned sessions

The list of assigned sessions, with date and status. Open one and you see the exercises with sets, reps and loads, and you can mark what was done and at what perceived effort.

Figure 25.1 — History

Two tabs, thirty days. **Sessions** lists past workouts with date, duration and the RPE the athlete reported, with a coloured square running from green (up to 3) to red (above 8); tapping a row reopens the session. **Wellness** shows one card per day with the score as a percentage and five small bars — fatigue, soreness, stress, sleep, mood — where a full bar always means the good condition.

The score is the same one the coach reads in the heatmap: the five items added up, divided by 25, times a hundred. It is how an athlete sees their own consistency, and the simplest way to show them that those five morning numbers do not disappear down a hole.

26 Profile

Figure 26.1 — Profile

Photo, name, club, and the personal card: position, jersey number, height, weight, email, teams. These are read-only — the coach keeps them up to date from the athlete record — so anything wrong has to be corrected there. At the bottom sit the sign-out button and the legal documents.

The app language is changed from the drop-down at the top right, present on every screen, not from here.

27 Getting the team to adopt it

Three things make the difference, and none of them is technical.

1. **Explain what it is for.** An athlete who understands that wellness is there to keep them from getting injured will fill it in; one who experiences it as surveillance will not.
2. **Fix the moment.** The same time every day — before breakfast, or on arrival at the gym — is worth more than any reminder.
3. **Show them.** When an athlete discovers that their numbers changed Thursday's session, filling the form stops being a chore.
